Profile

Full-Stack Software Developer specializing in scalable web platforms, mobile applications, and API-driven architectures. Strong focus on clean code, maintainability, and end-to-end product delivery.

Technical Skills

- **Programming Languages:** Python, TypeScript, Go, Java, SQL, Elixir
- **Frontend:** React, Next.js, React Native, Astro, Tanstack Router
- **Backend & APIs:** Node.js, Express.js, Hono.js, FastAPI, Phoenix, Spring Boot
- **Databases & Storage:** PostgreSQL, SQLite, ORM (Bun, Prisma, Drizzle)
- **DevOps & Cloud:** Docker, Kubernetes, GitHub Actions, Cloudflare, Render, Tilt
- **Testing & QA:** Cypress, Vitest, Pytest
- **Additional Technologies:** Apache Airflow, RabbitMQ, ONNX

Work Experience

Software Development Intern | Codedamn **June 2024 – August 2024**

- Developed and implemented Cypress-based comprehensive testing frameworks for web applications, reducing production bugs by 35% and enhancing platform reliability by ensuring robust feature validation across critical user workflows, integrated automated testing solutions and accelerate release cycles by 25%

Open Source Contributor | Innogeeks Winter Of Code (IWOC 2.0) **January 2024 – February 2024**

- Enhanced community-driven data science projects by contributing analytical features and implementing performance optimizations resulting in 40% faster execution times while creating detailed technical documentation improving project accessibility.

Projects

Habit Tracker REST API

TypeScript, Node.js, Express.js, PostgreSQL, Drizzle ORM, JWT, Zod, Vitest

- Built production-ready REST API for habit tracking with JWT-based authentication, comprehensive input validation using Zod schemas, type-safe database operations with Drizzle ORM, and advanced features including habit completion tracking, streak calculations, and statistical analytics with proper error handling and rate limiting middleware
- Achieved comprehensive test coverage using Vitest with isolated test environments, automated CI/CD pipeline setup for continuous integration, and designed scalable database schema with PostgreSQL migrations and environment-specific configuration management

BookStore Modular Monolith

Java, Spring Boot, Spring Modulith, PostgreSQL, RabbitMQ, Docker, Kubernetes

- Architected modular monolith e-commerce platform with domain-focused modules for Catalog, Orders, Inventory, and Notifications, enabling asynchronous event-driven communication and external service integration using RabbitMQ
- Adopted schema-per-module design in PostgreSQL enhancing test isolation and deployment flexibility, containerized services and prototyped Kubernetes deployment with observability through Zipkin tracing and Spring Actuator

News API Service

Go, PostgreSQL, Bun ORM, Docker, Kubernetes, Testify, Tilt

- Engineered production-grade REST API in Go for news article management with structured logging, fault-tolerant error handling, dependency injection for modular architecture, and achieved 95% unit test coverage using Testify and Gomock
- Integrated Bun ORM with PostgreSQL for schema migrations, containerized integration testing via TestContainers, and streamlined developer workflows with Makefile automation, Docker builds, and rapid Kubernetes deployments using Tilt

Fantasy Football Analytics Platform

Python, FastAPI, Streamlit, Machine Learning, ONNX, LangGraph, Apache Airflow

- Developed analytics platform unifying REST APIs with ONNX-optimized ML pipelines reaching 85% accuracy in player performance forecasts, designed interactive Streamlit dashboards and an AI assistant leveraging LangGraph and Gemini API to guide strategic roster decisions
- Automated FAAB bid optimization reducing overspending by 30% and orchestrated daily data pipelines with Airflow

Education

Bachelor of Technology in Information Technology **2021 – 2025**

Noida Institute of Engineering and Technology, Dr. A.P.J. Abdul Kalam Technical University (AKTU)
Greater Noida, Uttar Pradesh, India
